Congressman Tom Tiffany Supports PFAS Research

One of our greatest natural resources is water, and just like you, I am committed to protecting the quality of it for years to come.

To effectively address our water quality, I believe we need to conduct more federal research on per-and polyfluoroalkyl substances (PFAS), so we can better understand the impact of these chemicals as we consider how best to regulate them. **That's why I voted for H.R. 7289, the *Federal PFAS Research Evaluation Act*, which will allow the federal government to effectively research the impact of PFAS on our health, environment, and communities.**

This legislation is a meaningful step forward and will help provide a risk assessment for states, like Wisconsin, to follow.
